

Dựa vào req.url để lấy đường dẫn rồi so sánh

```
JS index.js x JS app.js
Bai2Router > JS index.js > ...
1 var http = require("http");
2 var app = require("./app.js");
3 http.createServer(app.load_router).listen(1234);
```

Tách cái router riêng ra file

```
JS index.js JS app.js x DocFile
Bai2Router > JS app.js > DocFile
1 var fs = require("fs");
2 function DocFile(duongdan,res)
3 {
4   res.writeHead(200,{"Content-type":"text/html; charset=utf-8"});
5   fs.ReadStream(duongdan).pipe(res);
6 }
7 var load_router = (req: any, res: any) => void
8 var load_router = function(req,res){
9   var path = req.url ;
10  switch (path)
11  {
12    case "/":
13    {
14      DocFile("trangchu.html",res);
15      break;
16    }
17    case "/vantho":
18    {
19      DocFile("trang1.html",res);
20      break;
21    }
22    default: DocFile("404.html",res);
23  }
24 }
25 module.exports.load_router = load_router ;
```
